

visualizing eBay community

Description:

pusheX is a tool that helps you understanding the connections between different ebay users. You can crawl ebay by username or by auctionnumber. The gathered information is then used for visualizing the buyer-seller connections. But you can also have a look at the statistical values of a user, i.e. amount of sales/buyings, bids of other users on sold article and so on.

This project was created as a study for the class "Media Conception & Production" of the faculty [Digital Media](#) of the [University of Applied Sciences](#) in Zweibrücken, Germany.

License:

pusheX is published under the GNU General Public License (GPL) – so feel free to distribute to your friends. You can also change it for your own purpose. If so we would be very pleased to get a message about that

The collected data is public available. No privacy is harmed by using this tool.
All data is collected for study purpose only.
